**McGregor Plant Sales Inc, Florexpo and GGG International sign
new license agreement.**

September 2006, GGG -International and McGregor Plant Sales Inc. signed licensing agreement on genetics to be produced by Florexpo.

Agreement opens additional sales and production channel for GGG genetics in the US in the 2006/2007 season.

“The addition of GGG’s genetics to the Florexpo line has indeed strengthened and diversified our annuals selection for 2007,” says Doug McQueen, VP of McGregor Plant Sales. “We’ve broadened the colors of osteospermum to stunning yellow and orange colors. We’ve add Tibouchinas for the first time, and we continued to strengthen our heat loving plants for warmer regions.”

The agreement includes twenty one varieties:

Osteospermum, Alexander and Maxima offer stunning orange and yellow blooms with compact and sturdy upright growth.

Fuchsia SummerMelody® Series is distinguished by enormous weather stability, early flowers and compact growth.

Nemesia Kaboutertjes® series is early flowering and has five colors with upright, compact habits.

Tibouchina Royal Dreams® collection, with five growth habits, is a valuable enrichment to bedding and balcony containers and harmonizes very well with New Guinea Impatiens

SummerLovers® collection includes Bidens, SuperSun XXL with larger flowers, Lantana Simon Series which are especially compact for easier garden control and Sutera

Copa rose which has a “large” dark pink flower

Growers will be able to source genetics in URC form direct from McGregor Plants Sales and shipped direct to door from Florexpo in Costa Rica. McGregor Plant Sales and Florexpo offer a flexible online ordering and order management system which allows growers to view and edit orders in real time to live availability.

More.
